

ALFIDO TECH REVENUE OPTIMIZATION ANALYSIS

Prepared By: Sarah Ramzeen

Data Analytics Internship Project

Business Question

Which regions, product categories, and products generate the highest revenue, and what strategies can improve business performance?

Dataset Overview

- Dataset Name: Superstore Sales Dataset
- Total Records: 9,800
- Total Features: 20
- Analysis Tool: Python (Pandas, Matplotlib)
- Objective: Identify revenue drivers and business opportunities

KPI Analysis

Key Performance Indicators

- Total Revenue: \$2,261,536.78
- Total Orders: 4,922
- Total Customers: 793
- Average Order Value: \$459.48

Key Insight

The business generated more than \$2.26 million in revenue from 4,922 orders placed by 793 customers. The average order value of \$459.48 indicates strong customer spending behavior.

Key Findings

Business Recommendations

Recommendations

1. Increase marketing efforts in the West and East regions.
2. Expand inventory for Technology products.
3. Promote top-selling products to maximize revenue.
4. Improve sales performance in lower-performing regions.
5. Plan promotional campaigns during peak seasonal periods.

Conclusion

This project analyzed sales data to identify important business trends and revenue drivers. The analysis revealed that the West region, Technology category, and several high-value products contributed significantly to overall revenue. Seasonal trends showed strong sales growth during the final quarter of the year. The insights and recommendations provided can help Alfido Tech make data-driven decisions, improve resource allocation, and optimize revenue growth strategies.
