Executive Summary

The objective of this project was to analyze retail sales data and identify business insights related to sales performance, customer behavior, product demand, and seasonal trends. The dataset was cleaned and analyzed using Python, Pandas, and Matplotlib.

KPI Results

- Total Revenue: \$2,261,536.78
- Total Orders: 4,922
- Total Customers: 793
- Average Order Value: \$459.48

Output –

KPI Observations

Total Revenue: \$2,261,536.78

Total Orders: 4,922

Total Customers: 793

Average Order Value: \$459.48

Interpretation

The company generated a total revenue of \$2.26 million, indicating strong sales performance.

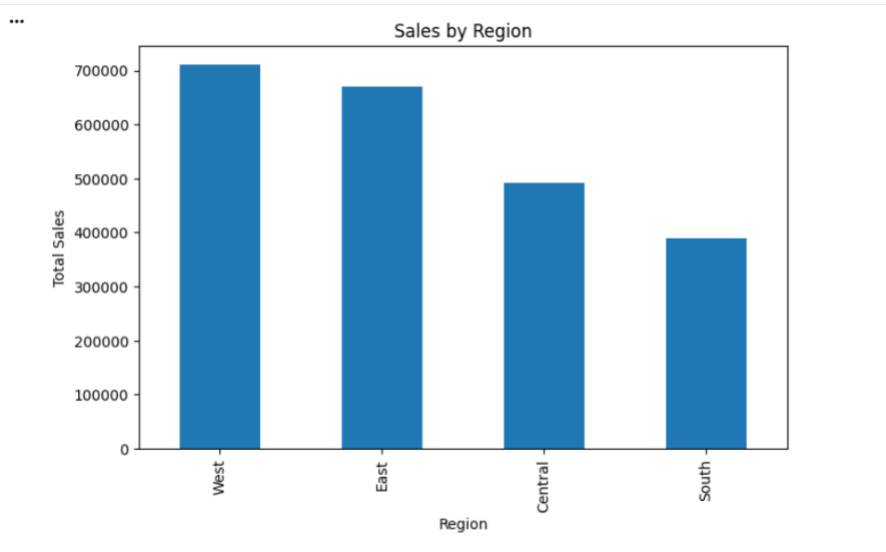

A total of 4,922 orders were placed by 793 unique customers.

The average order value of \$459.48 shows that customers generally place medium-to-high value orders.

The ratio of orders to customers suggests that many customers made repeat purchases, indicating customer retention and loyalty.

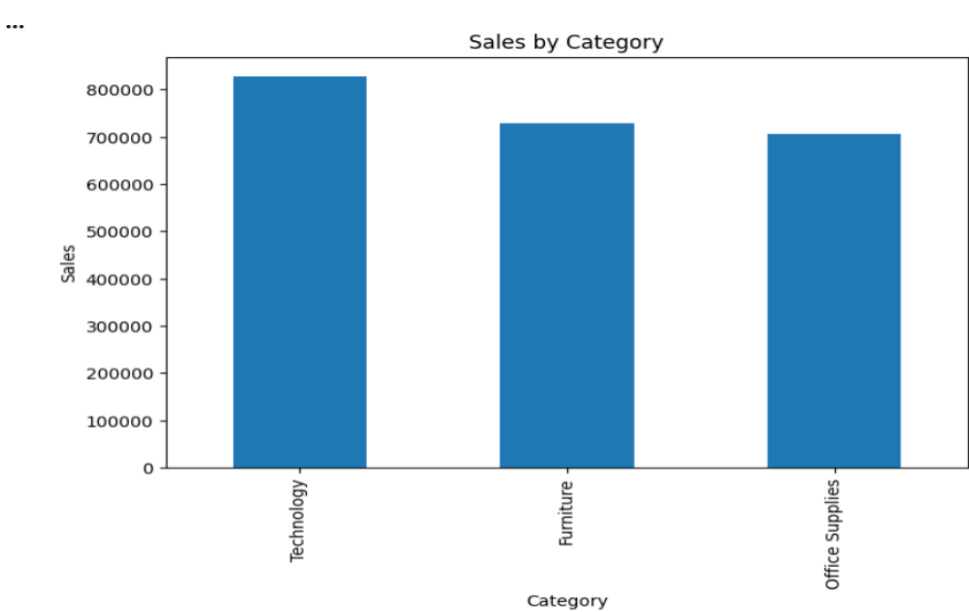

Regional Analysis

The West region generated the highest sales revenue (\$710,219.68), followed by the East region (\$669,518.73). The South region recorded the lowest sales performance.

Category Analysis

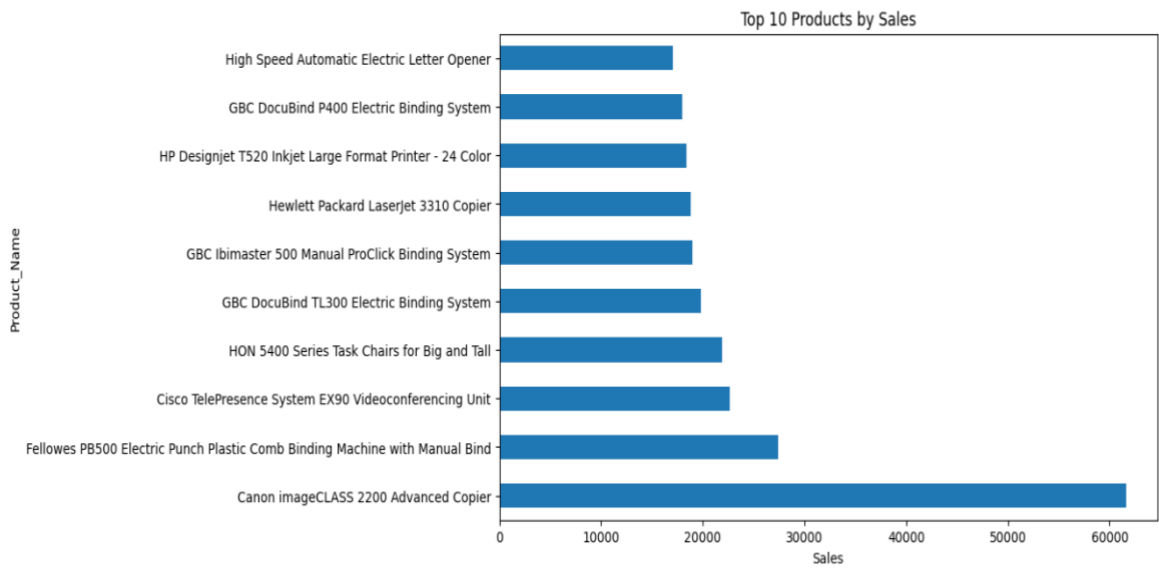

Technology was the highest-performing category with sales of \$827,455.87. Furniture and Office Supplies also contributed significantly to overall revenue.

Product Analysis

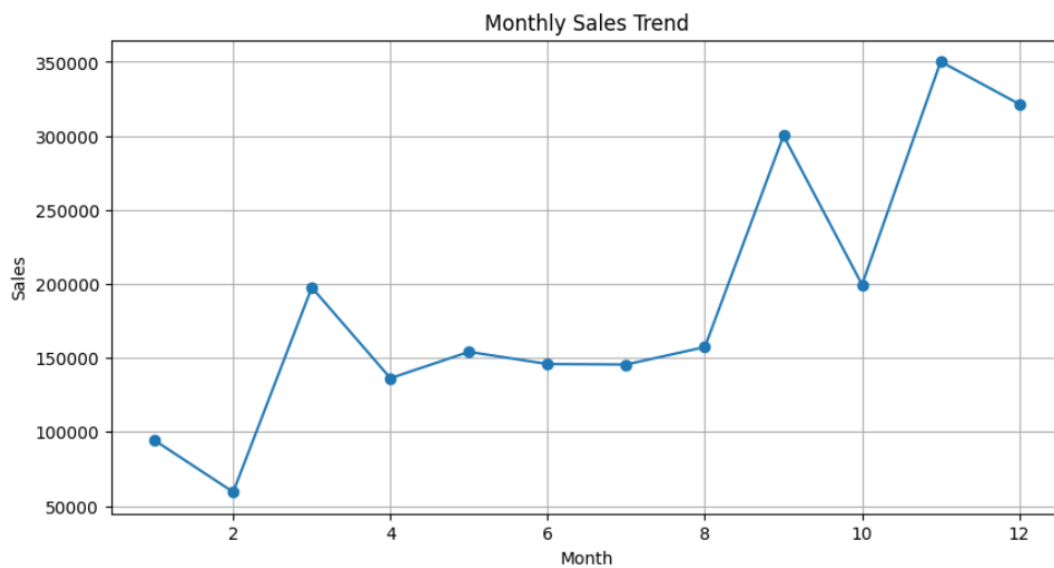

The Canon imageCLASS 2200 Advanced Copier was the top-selling product, generating sales of \$61,599.82.

...

Monthly Trend Analysis

Sales peaked during September, November, and December, indicating strong seasonal demand during the final quarter of the year.

Recommendations

1. Focus marketing efforts on high-performing regions.
2. Increase inventory for technology products.
3. Promote top-selling products.
4. Improve performance in lower-performing regions.
5. Plan campaigns during peak seasonal periods.

Conclusion

The analysis successfully identified key sales trends and growth opportunities. The findings can support data-driven business decisions and improve future sales strategies.
